

ULTRA-JACK®

LETS YOU REACH
UP TO 50 FEET

METALTECH®

THE ULTIMATE ALUMINIUM SCAFFOLDING SYSTEM

The Ultra-Jack system is held securely on aluminum poles with a strong spring-loaded cam lock mechanism. You will rise to the desired height with the foot pump and to descend with the hand crank. A productive and versatile solution that offers a secure access for all types of projects.

Perfect for shingling, siding, sheathing, insulating, painting, building, roofing, home repair and maintenance.

A PRODUCTIVE AND VERSATILE SOLUTION THAT PROVIDES SAFE ACCESS FOR DIFFERENT TYPE OF PROJECTS

The Ultra-Jack System allows you to raise workers, heavy-duty equipment and materials with the push of your foot, and to lower them with the turn of the hand crank.

The Ultra-Jack System includes aluminum poles with a rubber facing, which offer more rigidity and superior strength over wood poles.

This versatile system can easily be adjusted to widths from 14" to 24" and reach up to 50 feet high.

The poles can be used with two types of bases to accommodate any groundwork surface. The poles are equipped with a replaceable rubber facing that ensures a strong grip as the jacks move up and down.

The anti-slip base works well on flat and hard surfaces, and the spiked anchors offer security on soft and uneven surfaces. The system is configurable with a variety of options that accommodate multiple configurations and all project environments.
